

In the Operating Room

In the operating room, you lie on a bed.
You see big machines and lights.

The sleep doctor puts a sleep mask over your mouth and nose. This mask gives you air that makes you sleep through the whole surgery. You will wake up only when your surgery is all over. For surgery, stickers stick to your chest. A soft clip or piece of tape holds on to your finger. A soft tube is put on the back of your hand. All the sticky things will come off before you go home.
